om data that have been collected the Minnesota state farms during past two or three years it has been d that the cost of keeping the age farm horse during the year This includes feed, shelter, la- aring for the horses, depreciatio shoeing. As an offset against this ense bill it is found that the aver farm horse in Minnesota works on average of about four hours per during the year, not including days and holidays.

any an otherwise naturally attrac farmstead is severely handicapped the standpoint of appearance ugh putting the hogpens and other tering outbuildings too near the se and too near the main road s does not make so much difference one way to the proprietor if he is live and die on the place, but it kes a whole lot of difference to e he wants to sell, as well as to the y people who pass the place daily ere would seem to be an appropri- place for the hogs—namely, out k of the barn and the barn back of house.

he $90 steer and the $200 draft re are too valuable propositions to turned into a pasture fenced with ed wire unless some provisions are e for grounding the wires. It is a ple job to do this, and completed it ns mighty cheap insurance. At in als of every six to eight rods a e of wire should be run down into ground a foot or more close to the and so arranged that it will en- closely or touch each strand of e wire. When thus equipped, if a ning bolt strikes the fence it will carried into the ground, instead of ing, as it so frequently does, from fence to the stock that may be ding or lying near.

The family cow will stow away a bushel of lawn grass most any night notwithstanding the fact that she may be apparently full to bursting when she comes from pasture.

Almost invariably the low acres on the farm are the best and richest ones if given a chance. It is because of this fact that it is the height of bad management not to tile such low land.

All fruit is likely to deteriorate somewhat in quality in the process of canning. For this reason it is well to select a portion of the best fruit to be had for this purpose. Sugar and cans are too high priced to use for fruit that is stale or third class.

The elements of fertility contained in a load of straw have been found to be worth much more than a dollar Entirely apart from the humus value of the straw, the value indicated would seem to furnish good reason for returning it to the land in some form instead of burning it up.

It is just as impossible to maintain soil fertility under a one year renting system in farm management as it is for water to run uphill. In the first case it is against human nature to do anything but skin the land to a finish In the second it is counter to the law of gravity, the one being quite as much in force as the other.

Hundreds of bright boys and girls leave rural communities on the plea that there are so few social advantages at home, and, strange and contradictory as it may seem, scores of these same bright boys and girls get into all kinds of grief in the cities to which they go as a result of having too much society and often of the wrong kind.

The getting of a blue grass lawn started may be greatly hastened by planting at intervals of three or four feet each way pieces of blue grass turf six or eight inches square. These will spread and before long run together We have seen several years required to get a stand of grass by seeding that could be got by the sod method in the course of a single season.

Reports of the agricultural department published early in May show an abandonment of 6,469,000 acres of the area sowed last fall to winter wheat. This is 20 per cent of the total and is said to be the largest area abandoned in many years. Of the area remaining, 25,744,000 acres, the condition on May 1 was 79.7 per cent, as compared with 80.6 per cent the month previous, and 86.1 on May 1, 1911.

Wolves are responsible for a good deal of damage to stock and poultry interests in some sections, yet rarely will you find a granger who will kill a she wolf in the winter or early spring if by letting her alone he can get the bounty on a batch of four or five whelps in May or June. In sections not a few it has been found that for the reason mentioned the offering of bounties tended to defeat this very object.

The rye pasture which was seeded and got a good start last fall has come in mighty handy this spring to tide over the period when there was practically no hay in the barn and mighty thin picking in the blue grass pasture The writer heard one farmer remark the other day that hereafter he would always sow a patch of rye to provide early pasture for his stock. He's wise. There should be many others following his example.

A South Dakota farmer writing to an agricultural journal states that he has found that the placing of a single seed of flax in a hill of potatoes at the time of planting will effectually keep the bugs away. To the fellow who has used various schemes and tried several poisons for getting rid of the potato bug pest this suggestion will seem too good as well as too easy to be true. However, the method is a cheap one to test, and a fellow can easily prove in his own case whether the claims made for it are exaggerated.

Judging from what a small boy of the writer's acquaintance said the other day, it is apparent that the lad rather prides himself on keeping his hands soft and white. This desire may have some points that may be urged in its favor, but somehow the writer doesn't incline to it as a commendable thing for either boy or girl and particularly does this hold true when the keeping of hands soft and white means that the tired and often overworked mother is left to do many tasks which these same white hands might otherwise save her. When the case is thus, white hands are not a mark of merit, but dishonor.

Many an old tree, decrepit, unsightly and sick, may be rejuvenated by careful treatment the same way that a horse or man may be by the right kind of doctoring. In some cases this treatment may require sharp pruning and cutting back to give vigorous new growth and a better form. Sometimes the trunk is sick, and wounds may need cleaning out and projections paring down so that they will the more quickly heal over. Perhaps the soil has become packed and needs loosening to give better circulation of air and moisture, while sometimes, in addition to this, the application of a generous amount of fertilizer will do much to fetch a tree out of such a "down" spell. It takes a long time to grow a tree, and before one that has done long and faithful service is removed pains should be taken to put it on its feet again.

## DOMESTIC SCIENCE AT HOME.

We hear a good deal these days about domestic science training in the public school. This is well and good as far as it goes, but in a way it is a bit on a par with leaving to the teacher the task of inculcating simple honesty, respect for authority and some other desirable traits. There is no place on earth where a wide awake girl can learn more about practical domestic science in a shorter time than under the direction of her own mother, provided the latter is worthy of the name. She will get there, as she undoubtedly should receive, training in some of the less pleasant aspects of home keeping—scrubbing, sweeping and the like—that are just as essential parts of domestic science as making white sauce, fricasseed potatoes and angel's food cake. Of course if the girl's mother has been keeping house for twenty years and has not yet learned to make a light loaf of bread, properly roast a piece of meat and keep her home bright and tidy it will be well for the girl to get all the pointers she can from other sources, including the domestic science course in school.

## JUST HORSE SENSE NEEDED.

It is safe to assume that the grief that corn growers have had in securing what they supposed to be good seed and the further grief they are bound to have from planting corn they supposed was good, which will not be, will result in some radical changes in the method of securing the supply of seed next fall Instead of trusting to luck and selecting it at husking time, the latter part of November, they are going to pick it before the first of October, when they can not only select early maturing ears, but have ample time in which to dry it out thoroughly before storing it away for the winter. There is absolutely no question that if the supply of seed ears were gathered by the time mentioned, dried out thoroughly before cold weather and kept dry during the winter months there would be no need whatever of giving the corn a test before planting it. In other words, the application of just good horse sense to this seed corn question would cure 90 per cent of the trouble that corn raisers are having this season.

## CO-OPERATIVE POTATO GROWING

A plan is being worked out in the potato growing section of Wisconsin that is worth copying elsewhere. Briefly, it consists in ten or more farmers in the community agreeing to plant three or more acres each of the same kind of field potatoes. The advantages of this appear at a glance—greater uniformity in time of planting, methods of culture and the co-operative study of conditions favorable to this particular variety and, lastly and more important than all, the raising of enough potatoes of a given kind so as to make carload shipments to central markets. If this plan is persisted in it will not be long until buyers will come to look to such a neighborhood for this particular kind of potato, and this interest of the buyer is bound to result in a better market and better prices for the raisers.

## WHY THEY ARE LOAFING.

Items appearing in several papers in the middle west seem to seek some mysterious reason to account for the fact that apple trees in the section referred to are practically devoid of blossoms this season. The reason is not far to seek, and it is not mysterious. The failure of the trees to blossom is chiefly due to the fact that trees under average orchard conditions do not have sufficient vitality to produce a heavy crop of fruit two years in succession. Last year the trees bore a heavy crop, and this, coupled with an unusually dry summer, reduced their vitality to a point where it was impossible for them to set fruit buds for this season. Only when an orchard is fertilized and the fruit thinned severely can trees be expected to set fruit each year.

## POISON FOR PESTS.

Commercial arsenate of lead is coming very largely into use as a substitute for paris green in spraying fruit trees, vines or bushes for the several insect pests that attack them. While different amounts are used to a given quantity of water, two and a half pounds to fifty gallons of water is the strength generally recommended. The arsenate should be worked into a fine cream before being put into the spraying tank, and the solution should be stirred frequently to keep it properly mixed. This poison is just as effective as paris green, keeps in solution better and is not so likely to burn the foliage. Where blight and other fungous diseases are to be checked the arsenate of lead may be used with either the dilute lime-sulphur solution or with the bordeaux mixture.

## A RANK INJUSTICE.

In more than one state the law covering the ordering and placing of boundary lines seems to be wretchedly inadequate. In a case of this kind with which the writer is acquainted a property owner has thus far been unable to get a fence bordering the highway set where it should stand according to the survey without an expensive lawsuit. Common justice would seem to suggest that when a boundary has been accurately determined the authority of the law should be available at once without expensive litigation for the placing of a party or highway fence where it ought to be.

# MISS MAVERICK

By ALAN R. TEWKESBURY

When gold was discovered in the Elkhorn region I went to Spotswood, which was situated in the center of the mines, and opened a bank. The country round about was pretty lawless, but Spotswood was, for a mining town, a very respectable place There was a church, a real court of law, and but few citizens went armed. I found it difficult to get clerks, for the young men who came there from civilized localities preferred to engage in mining to working on a salary.

One day a comely young woman about twenty-seven years old came into the bank and asked for a position She said that she had graduated at a business college in the east, where she had got a few ideas about the banking business. I engaged her at once and was glad to get her. She took right hold and seemed to learn the methods by intuition. Very soon she was valuable on the books and as a paying or receiving teller, though it was difficult to get her to occupy the windows. Why I never could tell

My wife used to come into the bank occasionally, and the first time she saw Miss Maverick, my woman of all work, she took a great dislike to her. Women are apt to be jealous of any other woman, especially if good looking, that their husbands are thrown into close relations with. Therefore I paid no attention to my wife's dislike. I have made it a rule of my business life to keep personal control of the funds committed to my care. There was no necessity for making any new ones pertaining to my clerk, for my system did not admit of her ever getting away with a cent. From the moment the vaults were opened and the cash brought out till it was locked up again I was in the bank and where I could oversee every part of it.

I asked my wife why she distrusted Miss Maverick, and she said that every time the two came near each other my wife felt a repulsion that was almost painful. Without a better reason than this I refused to harbor any suspicion against my clerk.

"Send her away," said my wife.

"Are you jealous of her? If you are you must subdue your jealousy, for Miss Maverick of all my employees is the most valuable."

"Very well; you'll see."

"See what?"

"That I'm right."

Nothing more was said about the matter, and I bore myself so discreetly that I believed my wife had concluded after all there was no danger of my running away with her rival. Business was increasing all the while, for the mines were taking out a great deal of gold, and I was engaged all day and often at night.

One day at noon, when all the clerks except myself and Miss Maverick had gone to dinner, I was sitting on my perch in the bank, resting and scanning a newspaper. Miss Maverick was at her desk working. Suddenly the stillness was broken by a click. To persons living on the frontier a click means a great deal. It certainly did to me, sitting as I was in a bank with no protection except a woman. With a start I looked up, and through the receiving teller's window I saw a man covering me with a revolver.

"Just sit quietly where you are and you won't get hurt," he said. "Nan, proceed."

The last two words were spoken to Miss Maverick, who arose from her seat and, taking a satchel from the drawer of her desk, went into the paying teller's cage and scraped the funds there into the bag; then, going to the receiver's cage, she did the same thing.

I wondered why I was not ordered to put up my hands, but it was plain that Miss Maverick had taken care of any weapons I had been used to keeping handy. Indeed, from the first it was plain to me that she had applied for work in order to advise a pal as to the easiest way to rob the bank. When she had filled her satchel, turning to me, she said: "The next time a woman tells you anything she is sure of without a reason believe her. If she gives a reason you may know that she is wrong. Good morning!"

She walked out of the inclosure and disappeared. The man said to me: "Stay where you are for ten minutes. A confederate of mine has a bead on you and will kill you if you move or give an alarm." Then he turned and went out.

I didn't believe the story about the confederate watching me, so the moment he was out of sight I sprang from my seat. At the moment I heard a shot outside. Running out, there was the man who had robbed me lying on the sidewalk with a bullet in him. Miss Maverick was bending over him, weeping. A posse came from different points, where they had been watching, and gathered about the robber

It turned out that my wife, since she could not influence me, had given the sheriff her suspicions of my clerk. The latter had been shadowed, and it was learned that she was the wife of the most notorious desperado in that region. A note arranging the details of the robbery had been opened and passed on without the parties knowing their secret was out.

"What made you suspect the woman?" I asked my wife.

"Her nose is crooked."

This is the only reason I got, and she seemed to consider it quite sufficient.

TRY PLEAK'S FIRST
IT PAYS

Men's Oxfords

Wear and Service
In Shoes for Men

The kind that *wear*, that makes you absolutely sure that you get a square deal for your money.

The kind of *service* that is comfortable and thoroughly satisfactory.

This is what we give in all our Shoes. We would be foolish to give any less because we want to sell you more than one pair of Shoes.

Our prices are correct $3.00, 3.50, 4.00, 4.50

## ANSWER IT HONESTLY

Are the Statements of Villisca Citizens Not More Reliable Than Those of Utter Strangers?

This is a vital question.

It is fraught with interest to Villisca.

It permits of only one answer.

It cannot be evaded or ignored.

A Villisca citizen speaks here.

Speaks for the welfare of Villisca.

A citizen's statement is reliable.

An utter stranger's doubtful.

Home proof is the best proof.

J. W. Delaney, carpenter, West Eighth street, Villisca, Iowa, says: "I know from personal experience that Doan's Kidney Pills are a remedy of merit. I have used them for kidney complaint, lame and weak back and they have given me excellent relief. Some time ago my kidneys were not acting as they should and I had lameness and pain in my back. I used Doan's Kidney Pills as directed and they acted promptly in relieving me."

## THE REVIEW'S WANT COLUMN

FOR SALE—One Great Western Cream Separator, brand new, but will sell at actual cost in order to close out. Frank Lenhart.

FOR SALE—Nice sweet potato plants S. C Baker, Mutual phone. 46p

CHICKENS Cured—Of Gapes, Limberneck, Blackhead and Cholera. Buy Rogers, the poultry doctors medicines They cure. At the Western Produce Co., Villisca. 50p

LOST—Sunday, a gold ring with cluster of pearls, between my house and Methodist church or high school. Reward if returned to R. H. Pleak.

FOR SALE—Two good milk cows. Inquire of Fred Fisher. Mutual telephone. 20-84. 46p

LOST—Wednesday on 3rd avenue, lady's brown rain coat. Finder return to Mrs. W. J. Peterson, Villisca, route 1. 46p

LOST—On June 3, between Sams school house and Fryer school house, lady's light colored coat. Finder return to Review office. 46p

FOUND—A child's gold locket and chain, on the streets of Villisca yesterday. It can be had by calling at this office and paying for ad, 25c.
